**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to a method of making a semiconductor wafer having a plurality of IC devices comprising application of an insulative undercoating after or in combination with trimming and testing operations, classified in class 438, subclass 15.
  - II. Claims 10-15, drawn to IC devices comprising trim pad(s), a plurality of contact bumps and an insulative undercoating, classified in class 257, subclass 673.
- a. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product of invention II as claimed can be made by another and materially different process that does not include a testing operation as set forth by invention I.

Art Unit: 2891

- b. Because inventions II and I are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
